Siddharth Malviya

Automation Test Engineer | SDET

sidmlv43@gmail.com | +91 94548 76178 | Noida, India | github.com/sidmlv43

PROFILE

Problem-solving Automation Test Engineer with 1 year of hands-on experience building and scaling UI, API, and mobile automation frameworks for data-intensive, fintech, and SaaS product modules. Proven ability to catch hard-to-reproduce bugs, reduce test execution time, and architect reusable testing infrastructure. Currently building the Care-Reporting automation suite and a custom diagnostic SDK at Sprinklr, while having previously delivered 100+ automated test cases and migrated 250 test cases to codeless tools at Zupee. Strong expertise in Java, Selenium, Rest Assured, Appium, Cucumber, Jenkins, and CI/CD pipelines.

PROFESSIONAL EXPERIENCE

Test Yantra Software Solutions Pvt. Ltd. *May 2025 – Present*

Automation Test Engineer

Sprinklr, *Care-Reporting Module* *Oct 2025 – Present*

- Automated 150+ end-to-end test cases across 11+ widget types including Table, Pivot Table, Pie, Stacked Bar, Dual Axis, Line, Spline, Metric Grouping, and Copilot, ensuring accuracy of data-driven reporting insights.
- Identified and reported multiple UI bugs across the Care-Reporting module that were missed in manual testing, directly improving product quality before release.
- Built reusable utility libraries for charts, tables, and graph interactions, significantly improving framework scalability and reducing new test onboarding time.
- Refactored test suite execution — reduced individual test case runtime from 3+ minutes to under 1 minute (70%+ improvement) by eliminating redundant waits and optimizing driver interactions.
- Refactored legacy automation code into modular, reusable methods, improving readability, maintainability, and reducing code duplication across the framework.
- Collaborated closely with developers to debug flaky failures and accelerate defect resolution in an Agile/Scrum environment.

Sprinklr, *Care-Reporting SDK* *Nov 2025 – Present*

- Architected and developed a reusable diagnostic SDK to detect and log hard-to-reproduce agent session timing discrepancies — capturing cases where stored login/logout timestamps diverged significantly from actual session events.
- Implemented structured logging of session metadata including timestamps, session IDs, partner IDs, environment, username, and contextual diagnostics, enabling reliable root cause analysis.
- Designed a centralized logging system for test execution events, failures, and diagnostics, enabling real-time observability across the automation framework.
- Ensured modular and extensible SDK architecture, enabling seamless integration across multiple automation frameworks with minimal configuration.

Zupee, *Finance Module* *Jun 2025 – Sep 2025*

- Automated 50+ test cases covering wallet transactions, balance updates, fund transfers, and payment validations across the Finance module.
- Migrated 150+ existing test cases from legacy codebase to internal codeless automation tools (Trace for UI, Essence for API), significantly reducing framework maintenance overhead.
- Discovered and reported multiple UI bugs during automation that escaped manual QA — directly preventing potential production defects in payment flows.
- Automated KYC workflows including onboarding, document upload, ID verification, and status tracking using Appium for Android devices.
- Developed BDD scenarios using Cucumber + TestNG for improved business-level test readability and alignment.
- Simulated third-party payment and KYC APIs using WireMock, enabling reliable isolated testing independent of external service availability.

SKILLS

Languages & Frameworks: Java, Selenium WebDriver, Rest Assured, Appium, Cucumber (BDD), TestNG, JUnit, WireMock

Build & CI/CD: Maven, Jenkins, Git

API & Tools: Postman, Rest Assured, Trace (UI Automation), Essence (API Automation)

Defect & Project Tracking: JIRA

Testing Types: UI Automation, API Automation, Mobile Automation, BDD, Regression, Functional, Integration

EDUCATION

Bachelor of Technology — Computer Science & Engineering *2019*

Babu Banarsi Das Institute of Technology, Uttar Pradesh | First Division

Note: Following graduation, I spent time in self-directed upskilling in software testing, automation frameworks, and Java before transitioning into the industry in 2025.
