Siddharth Malviya

Automation Test Engineer | SDET | QA Engineer

sidmlv43@gmail.com | +91 94548 76178 | Noida, India | github.com/sidmlv43

PROFILE

Automation Test Engineer with 1 year of hands-on experience in designing, developing, and maintaining test automation frameworks using Java, Selenium WebDriver, REST Assured, Appium, and Cucumber BDD within Agile/Scrum environments. Proficient in end-to-end UI and API test automation across SaaS and fintech domains. Demonstrated ability to architect reusable automation SDKs, identify critical defects, and optimize test execution through code refactoring. Transitioned into QA automation in 2025 following 6 years in customer service, where I developed strong problem-solving and attention-to-detail skills essential for quality assurance.

PROFESSIONAL EXPERIENCE

Test Yantra Software Solutions Pvt. Ltd.

Automation Test Engineer | June 2025 – Present

Sprinklr - Care-Reporting Module

October 2025 – Present (Primary Project)

- Automated 150+ end-to-end test cases across 11 widget types (Table, Pivot Table, Pie, Stacked Bar, Dual Axis, Line, Spline, Metric Grouping, Copilot) covering functional and regression testing scenarios within monthly Agile release cycles.
- Wrote test cases from scratch using Page Object Model (POM) framework; created reusable utility methods for chart, table, and graph interactions to reduce test authoring overhead for future developers.
- Identified and reported 3–5 critical UI defects via JIRA with detailed reproduction steps, severity classification, and screenshots; prevented defects from reaching production through comprehensive automation coverage.
- Refactored test suite for performance optimization by eliminating redundant waits and optimizing WebDriver interactions, significantly improving test execution efficiency.
- Participated in daily standups, sprint planning, and sprint reviews; collaborated with developers to debug flaky test failures and accelerate defect resolution within the STLC.
- Executed regression test suites across each monthly sprint cycle to validate feature releases and ensure software quality before deployment.

Sprinklr - Care-Reporting Diagnostic SDK

November 2025 – Present (Parallel Effort)

- Architected and developed a reusable diagnostic automation SDK to detect and log hard-to-reproduce agent session timing discrepancies, capturing real-time divergence between actual and stored login/logout timestamps across test environments.

- Implemented structured event logging capturing session metadata (timestamps, session IDs, partner IDs, environment, username) enabling systematic root cause analysis of non-deterministic defects.
- Designed centralized logging for test execution events, failures, and diagnostics improving observability and reducing mean time to detect (MTTD) for intermittent issues.
- Ensured modular and extensible SDK architecture enabling seamless integration across multiple automation frameworks with minimal configuration overhead.

Zupee - Finance Module

June 2025 – September 2025

- Automated 40–50 new end-to-end test cases covering wallet transactions, balance updates, fund transfers, and payment validations using Selenium WebDriver and TestNG within the STLC.
- Fixed and refactored 100+ existing test cases by migrating them from legacy automation code to internal codeless automation tools (Trace for UI automation, Essence for API automation), reducing framework maintenance overhead.
- Identified and reported 3–5 high-severity UI defects in payment flows via JIRA during automation execution, preventing potential production incidents.
- Performed basic API test automation using REST Assured and Postman: validated response codes, response body structure, and endpoint behavior across payment and KYC APIs with fundamental assertion validation.
- Automated KYC workflows (onboarding, document upload, ID verification, status tracking) using Appium for Android mobile automation with basic UI interaction validation.
- Developed BDD test scenarios using Cucumber + TestNG following Gherkin syntax, improving test case readability and aligning automation with business requirements.
- Used WireMock for API mocking and service virtualization by leveraging pre-configured mock definitions to simulate third-party payment and KYC APIs, enabling reliable isolated integration testing independent of external dependencies.

TECHNICAL SKILLS

Programming Languages

Java

Test Automation Frameworks

Selenium WebDriver, REST Assured, Appium, Cucumber (BDD), TestNG, JUnit

API Testing & Mocking

REST Assured (basic request/response validation), Postman, WireMock

Mobile Automation

Appium (Android automation, basic UI interactions)

Testing Tools

Trace (UI Automation), Essence (API Automation)

CI/CD & Build Tools

Jenkins, Maven, Git, GitHub

Defect & Project Tracking

JIRA (defect logging, bug lifecycle management, sprint tracking)

Testing Methodologies

Agile/Scrum, Black Box Testing, Regression Testing, Functional Testing, Integration Testing, BDD

Browsers

Google Chrome (primary), cross-browser awareness (Firefox, Edge)

EDUCATION

Babu Banarsi Das Institute of Technology, Uttar Pradesh

Bachelor of Technology – Computer Science & Engineering (2019)

First Division

Career Transition (2019–2025)

Worked in customer service and family support roles while pursuing self-directed upskilling. Invested time in building foundational expertise in Java, Selenium WebDriver, test automation frameworks, and QA methodologies through online courses, personal projects, and technical communities. Officially transitioned into QA automation in June 2025 with Test Yantra Software Solutions.

KEY STRENGTHS

- **Defect Detection:** Systematic approach to identifying UI/API defects before production release
- **Code Quality:** Writing clean, maintainable test code following design patterns (POM, DRY)
- **Problem-Solving:** Strong analytical mindset for debugging flaky tests and optimizing execution
- **Agile Collaboration:** Active participation in sprint ceremonies and cross-functional resolution
- **Attention to Detail:** Customer service background translates to meticulous test design
